

**ABSTRACT OF THE DISCLOSURE**

A pneumatic dent puller for pulling and repairing dented metal panels, parts and structures of automotive vehicles includes a housing for enclosing therein an air hammer, a handle, a manually operable trigger and a threaded member attached to the housing. The threaded member is threaded into a hole formed on the surface to be pulled and as the technician simultaneously depresses the trigger and slightly pulls on the handle, the dented surface is pulled out to its original position by the combined actions of the air hammer and the threaded member.
